EXECUTIVE SUMMARY

- Collecting and exploring the data
- Cleaning the data
 - Removing Duplicates
 - Dealing with missing values
 - Normalizing the data
- Analyzing the data
- Visualizing the data
- Building the dashboard

INTRODUCTION

- An online survey was conducted and it asked software professionals across the world technical-related questions
- In this report we'll discover this data and ask questions that will be answered through the analysis of the data
- The questions to be asked:
 - What is the Gender, Age, Country, and education level of the respondents?
 - What database and programming language do the respondents mostly use?
 - What is the most desired database and programming language among the respondents
- Finally we'll discuss the:
 - Findings
 - Implications

METHODOLOGY

- Data Collecting
 - The data was extracted from the Stack Overflow website and was read in Python by Jupyter Notebook
- Data Cleaning
 - Duplicate rows were identified and removed using the pandas method `drop_duplicates`
 - Missing values were identified and replaced by the mode
 - Certain columns were normalized
- Data analysis
 - The distribution of the data was visualized using a histogram
 - Outliers were identified and dealt with using the interquartile range
 - Correlation among the columns was identified
- Data Visualization and Dashboard
 - The data was extracted from an SQL server and was visualized
 - A dashboard was built

RESULTS

PROGRAMMING LANGUAGE TRENDS

Current Year

Top 10 Languages Worked With

LanguageWorkedWith

Next Year

Top 10 Languages Desired Next Year

LanguageDesireNextYear

PROGRAMMING LANGUAGE TRENDS - FINDINGS & IMPLICATIONS

Findings

- JavaScript is the most common language worked with and desired, thus having it is a plus
- Although few respondents have little experience with Python, most of them chose it as their desired language to learn
- Many people know the Bash language but very few chose it as a desired language to learn

Implications

- Not so many are interested in the Bash language thus a decline in Linux users
- A lot of developers are migrating from JavaScript to Python

DATABASE TRENDS

Current Year

Top 10 Database Worked With

Next Year

Top 10 Databases Desired Next Year

DATABASE TRENDS - FINDINGS & IMPLICATIONS

Findings

- Most companies use MySQL but most respondents prefer not to work with it
- PostgreSQL is the most desired database to learn
- A lot of people would like to learn MongoDB but few work with it

Implications

- Institutes would face a lack of MySQL developers since not many are willing to learn it
- Microsoft SQL Server is going to lose popularity because not so many are willing to learn it

DEMOGRAPHICS

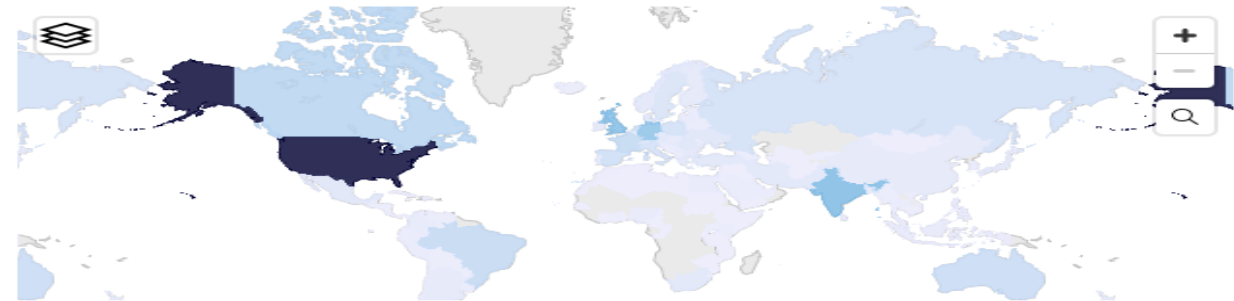

Respondents Classified By Gender

Gender
● Woman ● Man

Respondents By Country

Respondent (Sum)
865 38,170,293

Respondents By Age

Respondents By Gender Classified By Formal Education Level

Gender
● Man ● Woman

DISCUSSION

OVERALL FINDINGS & IMPLICATIONS

Findings

- Python and JavaScript are going to dominate the market
- PostgreSQL is keeping up with the pace as it's the most desired database language to learn
- Most respondents are male around 20-40 of age

Implications

- Microsoft SQL Server might leave the market very soon
- The Bash language isn't desirable
- Linux and Windows are dominating the OS market

CONCLUSION

- Learning Python and JavaScript is a winning investment
- PostgreSQL has proven to be efficient and desirable
- Linux and Windows are the most favorable OS for developers
- MongoDB will have a bright future
